

Adding and Removing Streetlights

SERVICE REQUEST

Let there be light!

If you're a city, municipality or developer looking to add or remove a streetlight, we can help. Here's how it works:

1. Apply

Apply online or by phone – it's quick and easy!

Once you've applied, you'll need to submit a site plan. This is where you'll pinpoint the areas where you want the streetlights. Once we get your request, you'll get a notification number. Be sure to keep it handy for a reference.

2. Design (7-14 days)

We'll start designing your new streetlights.

When designing new streetlights, we've got options for both wood or steel poles. All new lights will use LED bulbs and underground cables. Careful attention's made when designing around sidewalks, curbs and boulevards.

We may ask you for more details to better understand your request. Once we're done with the design, we'll have you review it as part of the written quote.

After you've approved it, changes made to the design may result in extra charges. It'll also change the construction schedule.

3. Written Quote (2 days)

You'll get a written quote along with all the paper work you'll need to sign. To stay on schedule, please sign and get them back as soon as you can.

4. Confirmation

You have 60 days to confirm the quotes.

We need confirmation in writing as well as any down payment that's stated. We'll also need you to confirm the timeline and the date your site will be ready for construction.

5. Approvals (10-30+ days)

Before we start, we need to secure land approvals. We'll work with municipalities, third parties and other utilities services. We do everything we can to secure land approvals, but we cannot guarantee anything. All approvals must be in place before construction.

6. Construction (10-30 plus days)

We're ready to get to work!

We've called Sask 1st Call, received material and scheduled the crew. When we're done, you'll get an invoice for the construction chargers.
